

# CONNECTING YOUR NEXT PROJECT

**CamdenBoss' strong inventory of core range terminal blocks puts us at the forefront of connector sourcing. We hold full compliance certifications and cover pitch sizes from 2.5mm all the way to 10.16mm.**

**CAMDENBOSS**  
CONNECT. ENCLOSE. INNOVATE.

## Pluggable terminal blocks

Pluggable terminal block solutions allow the disconnection and reconnection of wiring systems without the need to unscrew the wires. This allows an engineer a time saving option whilst carrying out maintenance. Pluggables are also useful for diagnostic equipment when connection is not required at all times.

Available in pitch sizes from 2.5 to 7.62mm in male and female types and various orientations.

## Wire to board terminal blocks

The standard wire to board solution with screw type connection. These have either wire protector or rising clamp cable entry. PCB terminal blocks are typically used for more permanent connections with rising clamp types allowing more flexibility with maintenance.

A comprehensive range of low and standard profiles - higher voltage types naturally have a larger profile and pitch size for added pin clearance. Pitches available from 2.54 to 10.16mm, providing a solid range for every application.

## DIN Rail mount pluggable terminal blocks

Creating a pluggable solution; with the added benefit of DIN Rail mounting. The ideal choice for installation tasks from machinery control cabinets to IoT hubs; without using a PCB. Providing quick and easy connection and disconnection from wire to wire.

Available in two pitch sizes, 5 and 5.08mm, fully compatible with CamdenBoss' female terminal blocks.

## Screwless terminal blocks

Screwless terminal blocks allow wires to be quickly connected through push-actuator terminals. In circumstances where wires need replacing or new systems connected, screwless options are highly beneficial. The wire cages do not perish, unlike wire protector terminal blocks, providing a prolonged life. HVAC, lighting and diagnostic applications benefit from screwless connections.

CamdenBoss' stocked types vary from wire to board and pluggable styles for your suited application, in pitch sizes from 2.54 up to 7.62mm.
