

PLASTIC FABRICATION

LOOKING FOR A CUSTOM ENCLOSURE?

TOOL-FREE PROCESS

- Flexibility to tweak your design post-prototype without costly tooling modifications
- No restriction on size, complexity, or quantity with sheet materials in stock and range of customisation options
- Low to medium start up quantities or volume manufacture in batches to suit your demand and schedule

MADE IN THE UNITED KINGDOM

- Designed, manufactured, and delivered all in-house in our 118,530 sq.ft facility in Mildenhall, Suffolk, United Kingdom
- End to end service for your project which can be picked up at any stage in its development
- 60+ years of experience in a wide array of industries with an expert technical team that can support you throughout your products life-cycle

SIMPLE PROCESS

STEP 1: DESIGN

Start your journey by defining your project with our expert design engineers at any stage in its development. Your product is designed using CAD/CAM to your exact requirements, optimised for tool-free manufacturing.

STEP 2: DEVELOP

Your pre-production prototype is built with the same tool-free process we use for final production. You get a sample to test and refine for final approval. We can also add additional features, including printing to meet your branding requirements or gaskets to meet your desired IP rating.

STEP 3: DELIVER

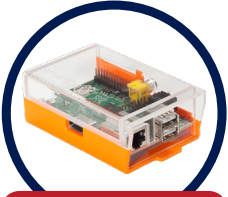

Seamlessly transition into production in batches that are flexible to your demand and schedule. If your project requires further revisions, design changes are only a simple CAD/CAM file change instead of costly tooling changes, so you can keep on innovating!

CUSTOM PORTFOLIO

SMALL

Custom PI Enclosure

Bathymetry Enclosure

Studio Clock Enclosure

Lighting Control Case

MEDIUM

Food Safety Device

USB Charging Unit

Research Display Unit

EV Charging Enclosure

LARGE

E-Bike Battery Charging Unit

Medical Imaging Enclosure

Water Monitoring Enclosure

Safe Charging & Storage Carts

Airport & POS Kiosks

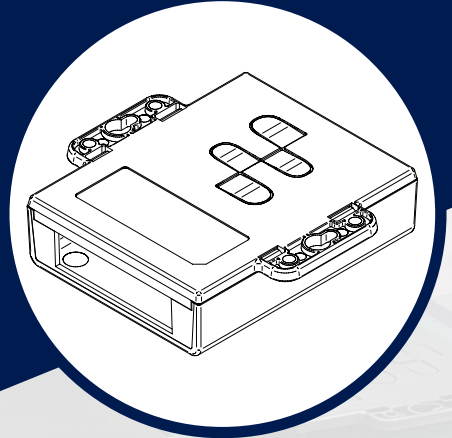

CUSTOM MOULDING

LOOKING FOR A HIGHER
VOLUME SOLUTION?

PLASTIC INJECTED PRODUCT

- Start with Custom Moulding or transition your Fabrication project into higher volume with the same team
- Join us at any stage in your project and let our expert in-house design engineers help develop your product
- We optimise for moulding, creating 3D CAD, detailed drawings and a 3D printed prototype before you commit to tooling

MOULDING YOUR VISION

- Your tool is produced via one of our UK or overseas tool partners, managed, overseen, and validated by our team
- Your product is moulded in-house in the UK and manufactured to your required quantities with a wide range of materials available
- Digital printing or embossing is achievable in-house to ensure your product meets your branding and labelling requirements
